

# **WHMCS Proxy Reseller module**

1.1.0

# 1. About the module

---

The module allows to create and manage proxies from your WHMCS. It contains 3 parts:

- Provisioning (modules/servers/proxycheap) – responsible for accounts management via API, also in client area
- Module Addon (modules/addons/proxycheap) – responsible for custom order form and API configuration.
- Custom Order Form and additional client area page (templates/\*) - responsible for displaying and formatting order form. It needs .tpl files in every used template (folders in /templates/ path).

ADD TO CART

*Custom interactive order form*

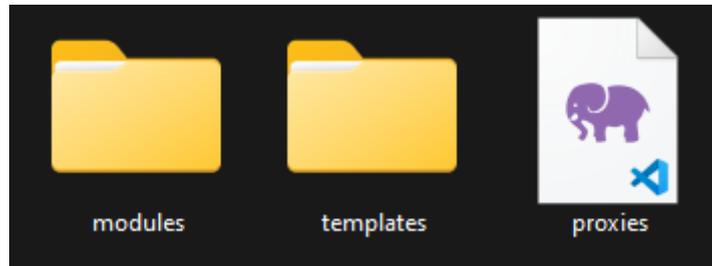

This module has been tested on **WHMCS 8.13.1** and **PHP 7.4**. If you have different version and have issues with it, let us know.

## 2. Installation

---

This part will teach you how to install and configure this module to make it work successfully. Please read it carefully.

1. Download the package and extract it on your disk. There will be 3 items.

2. Upload all of them (above) to your WHMCS main directory (There should already be directories named „**modules**” and „**templates**”. They will be merged with content of above directories).

*If you use custom client area template (other than 'six' or 'twenty-one'), please follow this additional point.*

2a. Open 'templates/six' directory from extracted package. There are two new files 'proxycheap.tpl' and 'proxycheap-form.tpl'. You need to **copy** both of them to **all templates you use** - to 'templates/<template name>'.  
*(Note: This text is enclosed in a red border in the original image.)*

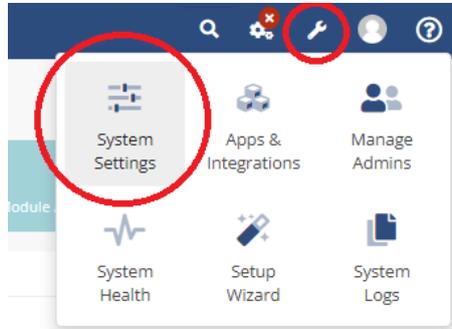

This will make the order form work for additional templates. These files can be adjusted according to needs. (Contact us if needed)

3. **IMPORTANT!** Before you move forward, make sure you have all mandatory fields filled in your profile on <https://app.proxy-cheap.com/account>

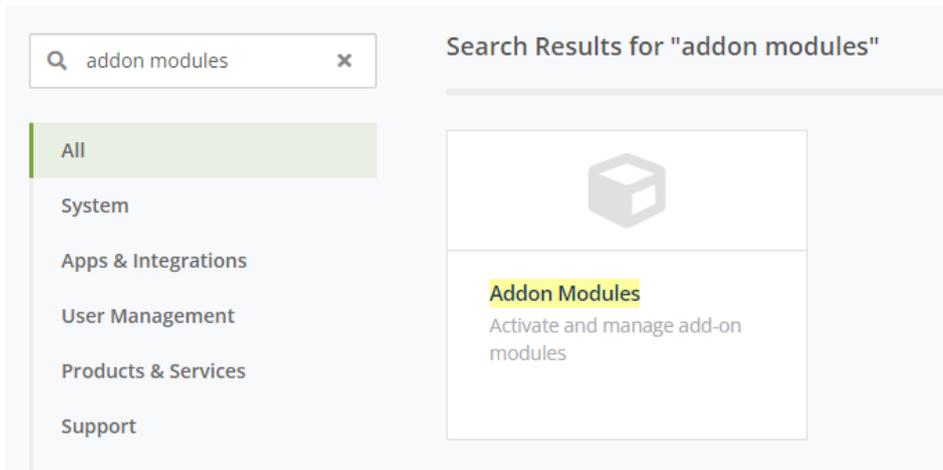

4. Installation is completed. Let's move on to configuration step.

### 3. Addon Configuration

1. Log in to your WHMCS admin area, hover to wrench icon in top right corner and select **System Settings**.

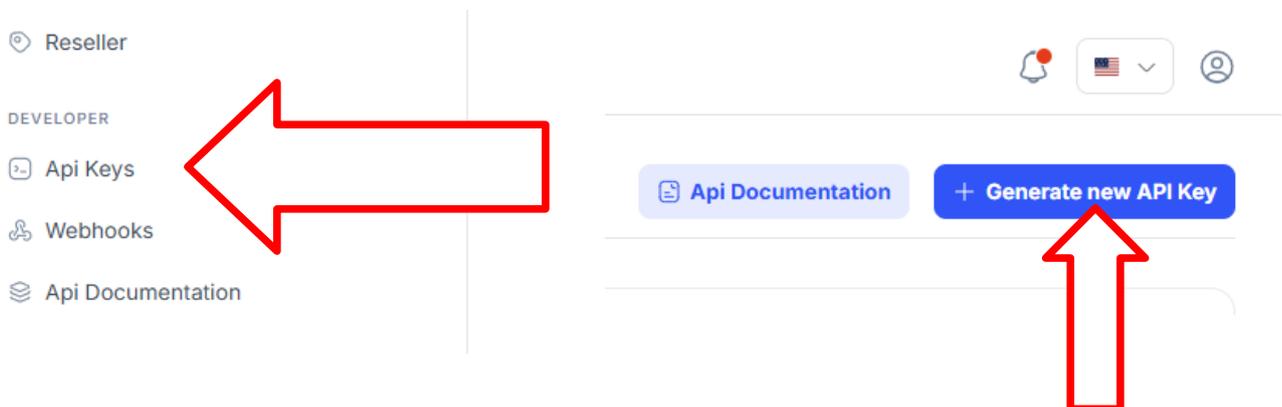

2. Find **Addon Modules**.

3. Find **Whitelabel Proxy** on the list of modules and click **Activate**. Afterwards, you need to configure API access here. It can be obtained from **Proxy Cheap dashboard**

<https://app.proxy-cheap.com/api-keys> (as shown below)

**Custom hostname** - should contain default domain or your own domain to use as a proxy. If you have your own domain and set DNS correctly to IP addresses used as proxy, it can be used. It will be displayed to customers in **credentials generator** in client area.

Hostname type:  Proxy Password:

```
$ curl -v -x http://xxxnoz7f-mob-any:PC_xxxxTI6OF6Cv@proxy-us.resi.global:5959 https://ipw4.icanhazip.com
```

Credential count:

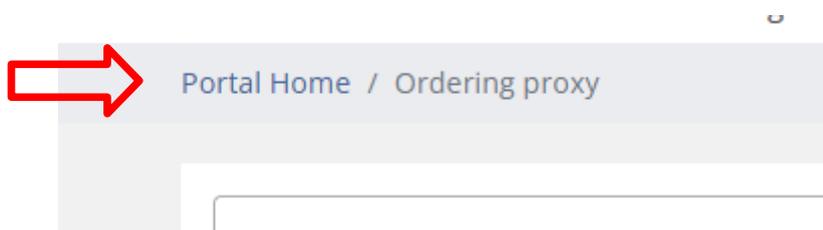

» MailChimp Integrates with the MailChimp email service for newsletters and email marketing automation.	1.0	WHMCS	<input type="button" value="Activate"/>	<input type="button" value="Deactivate"/>	<input type="button" value="Configure"/>
» PayPal Transaction Lookup This addon shows your PayPal account balance on the admin homepage & allows you to search PayPal Transactions without needing to login to PayPal	2.0.1	WHMCS	<input type="button" value="Activate"/>	<input type="button" value="Deactivate"/>	<input type="button" value="Configure"/>
» Project Management <b>PREMIUM</b> Track & manage projects, tasks & time with ease using the Official Project Management Addon for WHMCS. 4

**Order Form page title** - Here you can configure your own title of page where ordering proxies is possible.

4. When all field are filled, click **Save Changes** below.

This part of configuration is done. Now we can move to configuration of proxy products.

## 4. Product Configuration

Next, there are steps to add products. There are currently 4 types of proxy in terms of configuration:

- Static Residential / Static Mobile
- Rotating
- Datacenter
- Static IPv6

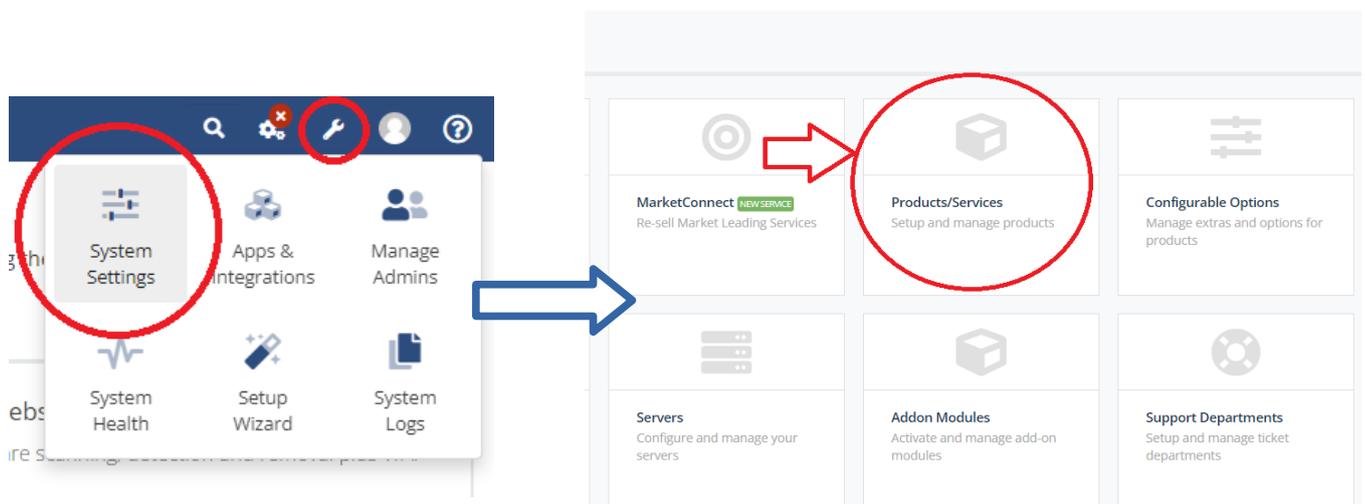

Depending on which one you wish to sell, you may skip the others you don't want.

! Please be careful, because IPv4 and IPv6 variants have different configuration.

### 4.1 Static Residential IPv4, static mobile product

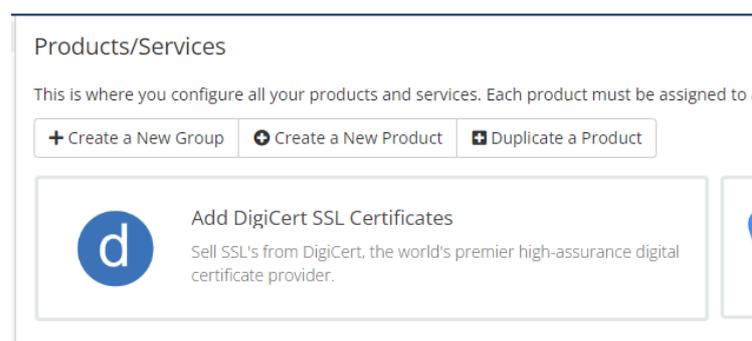

To add a new product (This step is common to all products):

1. Navigate to **System Settings** → **Products/Services**,

2. On this screen you can choose **Create a New Group** to create a group of proxy products.

3. To create a product, click **Create a New Product**.

4. Enter **product name** and select **Proxy-Cheap** as a module. Product type can be „Other“.

**Create a New Product**

**Product Type**  
Defines how WHMCS manages the item.  
Don't see the type of product you're looking for?  
Choose *Other*

Shared Hosting   Reseller Hosting   Server/VPS   **Other**

**Product Group**  
Click here to create a new product group

Buy Proxy

**Product Name**  
The default display name for your new product

Static Residential Proxy

**URL**  
A friendly URL to use to link to this product.

https://dev.whmcs/whmcs/index.php?rp=/store/proxy/\_static-residential-proxy

**Module**  
Choose a module for automation

Proxy-Cheap

**Create as Hidden**  
A hidden product is not visible to end users

OFF

**Continue »**

When done, click **Continue** to proceed.

### 5. Move to **Pricing** tab.

Products/Services

Edit Product

Details **Pricing** Module Settings Custom Fields Configurable Options Upgrades Free Domain Cross-sells Other Links

Payment Type  Free  One Time  Recurring

Currency		One Time/Monthly	Quarterly	Semi-Annually	Annually	Biennially	Triennially
USD	Setup Fee	2.00			2.00		
	Price	3.00			20.00		
	Enable	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Allow Multiple Quantities  No  
 Yes - Multiple Services: Each unit represents its own individual service instance  
 Yes - Scaling Service: Each service instance allows a quantity to be defined

Recurring Cycles Limit  To limit this product to only recur a fixed number of times, enter the total number of times to invoice (0 = Unlimited)

Auto Terminate/Fixed Term  Enter the number of days after activation to automatically terminate (eg. free trials, time limited products, etc...)

Termination Email  Choose the email template to send when the fixed term comes to an end

Prorata Billing  Check to enable

Prorata Date  Enter the day of the month you want to charge on

Charge Next Month  Enter the day of the month after which the following month will also be included on the first invoice

Here you can configure pricing for the product for different billing cycles.

**Setup Fee** is a fee paid only on the product setup, while **Price** is the recurring price.

Above pricing applies to the product itself. To configure pricing for one proxy, we will use Configurable Options, described in next steps.

Final price is a sum of product price and configurable option price from corresponding billing cycle (configured in next step).

Please be aware some kind of proxies can have different variants. It will be described below.

6. Move to **Module Settings** tab.

Edit Product

Automatically setup the product as soon as an order is placed

Automatically setup the product as soon as the product is published

Automatically setup the product when you manually create an order

Do not automatically setup this product

Make sure **Module Name** is **Proxy-Cheap**.

Select correct service from the list of **Service Type**. Here we are describing configuration of **Static Residential IPv4** (all variants) and **Static Mobile**.

7. Switch to **Custom Fields** tab. On this tab, we may need some custom fields to configure.

Edit Product

Details Pricing Module Settings **Custom Fields** Configurable Options Upgrades Free Domain Cross-sells Other Links

Field Name country|Country Translate Display Order 0

Field Type Text Box

Description Translate The explanation to show users

Validation Regular Expression Validation String

Select Options For Dropdowns Only - Comma Separated List

Admin Only  Required Field  Show on Order Form  Show on Invoice Delete Field

Field Name isp|ISP Translate Display Order 0

Field Type Text Box

Description Translate The explanation to show users

Validation Regular Expression Validation String

Select Options For Dropdowns Only - Comma Separated List

Admin Only  Required Field  Show on Order Form  Show on Invoice Delete Field

**For Static Residential IPv4 (all variants) or Static Mobile – create 2 custom fields:**

**Field names:**

country|Country

isp|ISP

Field Type: **Text Box** in all cases.

*Note: In all field names, you can change part after '|'. Only this part is presented to clients, for example on Invoices (When **Show on invoice** checkbox is selected).*

8. Click **Save changes** after filling each field details.

## **4.2 Adding Rotating product**

To add a new product of rotating proxy, you need to do configuration in **Pricing, Module Settings, Custom Fields, Configurable Options** tabs.

**Pricing tab:**

Currency	One Time/Monthly	
USD	Setup Fee	0.00
	Price	0.00
	Enable	<input checked="" type="checkbox"/>

Payment Type:  Free  One Time  Recurring

Allow Multiple Quantities:  No  
 Yes - Multiple Services: Each unit represents its own individual service instance  
 Yes - Scaling Service: Each service instance allows a quantity to be defined

Recurring Cycles Limit:  To limit this product to only recur a fixed number of times, enter the total number of times to invoice (0 = Unlimited)

Auto Terminate/Fixed Term:  Enter the number of days after activation to automatically terminate (eg. free trials, time limited products, etc...)

Termination Email:  Choose the email template to send when the fixed term comes to an end

Prorata Billing:  Check to enable

Prorata Date:  Enter the day of the month you want to charge on

Charge Next Month:  Enter the day of the month after which the following month will also be included on the first invoice

It's recommended to select **One Time** and set price to 0. Eventually set **Setup Fee** as desired. This product is based on bandwidth. Its price is set in configurable options and later manageable by product addons.

**Module Settings** tab:

Here you can select **Rotating Mobile** or **Rotating Residential**.

**Custom Fields** tab:

It doesn't need any custom fields configured here.

### Configurable options

You need one configurable option to allow configuration of bandwidth assigned here. How to do it for particular products is described later.

## 4.3 Static Datacenter IPv4 product (all variants)

To add a new product of rotating proxy, you need to do configuration in **Pricing, Module Settings, Custom Fields, Configurable Options** tabs.

**Pricing** tab:

Products/Services

Select correct **Service Type** from the list. Beware there might be many variants.

### Custom Fields tab:

Configure one custom field:

*Field name: country/Country*

*Field Type: Text Box*

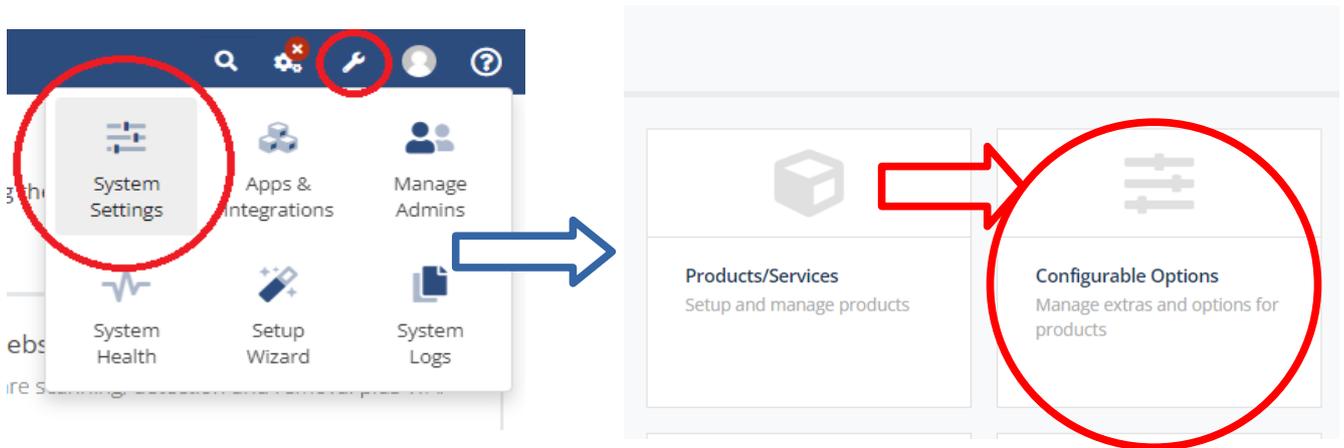

Static Residential IPv6 needs second custom field described as: *isp/ISP*

### **Configurable options**

You need one configurable option to allow configuration of proxy packages quantity assigned here. How to do it for particular products is described later.

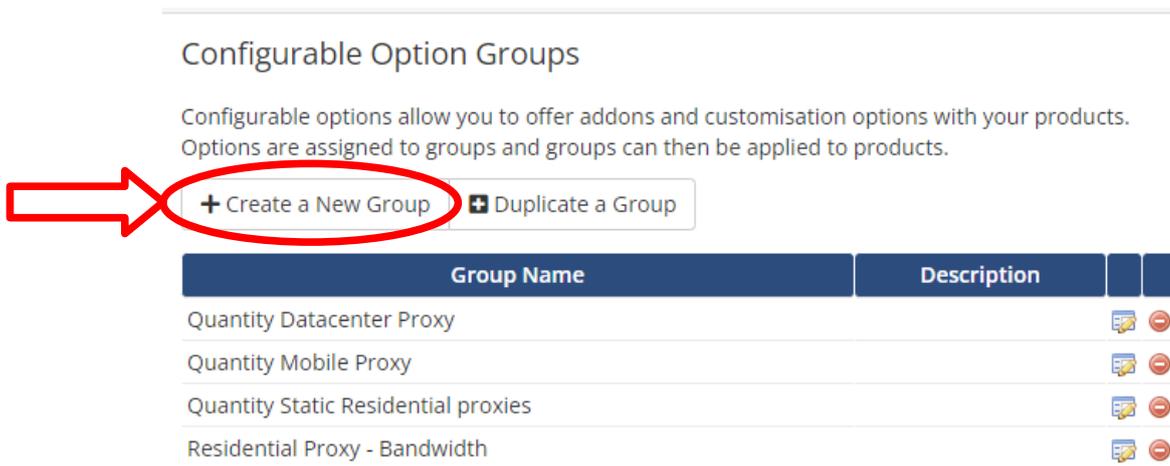

## 4.5 Configurable Options

1. All types of proxy use Configurable Options for proxy and bandwidth pricing. Let's configure them.

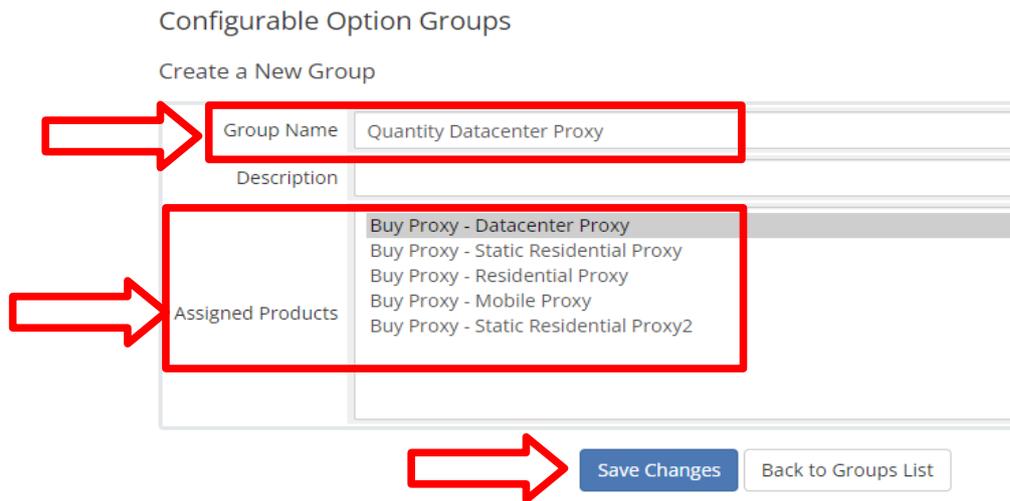

2. Click on **Create a New Group** to create a group of configurable options.

*Hint: It's recommended to create separate groups for each product type.*

3. Name the group. Depending on product type being configured, it can be named '**Quantity Datacenter Proxy**'.

**Assign** a product to the group in **Assigned Products** and click **Save Changes**.

4. Afterwards, click **Add New Configurable Option**. New modal will open.

5. For **Quantity type proxies** (in Static Residential, Static Datacenter IPv4, Static Mobile) set:

Option Name	quantity Quantity
Option Type	Quantity
Minimum Quantity Required	1
Maximum Allowed	0
Add Option	per Proxy <i>(it can be changed)</i>

For **Bandwidth** (in Rotating Mobile, Rotating Residential) set:

Option Name	bandwidth Bandwidth
Option Type	Quantity
Minimum Quantity Required	1
Maximum Allowed	0
Add Option	per GB <i>(it can be changed)</i>

For **IP Package** (in Static Residential IPv6 and Static Datacenter IPv6) set:

Option Name	packageid Bandwidth
Option Type	Quantity
Minimum Quantity Required	1

Maximum Allowed	0
Add Option	per GB <i>(it can be changed)</i>

6. Click **Save Changes**. The modal will refresh and allow to configure prices for one proxy/one unit of transfer (1GB) for all possible billing cycles.

Configurable Options

Option Name:  Option Type:

Minimum Quantity Required:  Maximum Allowed:  (Set to 0 for Unlimited)

Options		One Time/ Monthly	Quarterly	Semi- Annual	Annual	Biennial	Triennial	Order	Hide	
<input type="text" value="per Proxy"/>	USD	Setup	<input type="text" value="0.00"/>	<input type="text" value="0"/>	<input type="checkbox"/>					
		Pricing	<input type="text" value="2.99"/>	<input type="text" value="0.00"/>						

7. When finished, click **Save Changes** and again **Save Changes** on next screen.

Please note that required minimum/maximum value of bandwidth/quantity may be different on the order form than set here in configurable options. This is because order form uses API to determine required value. Configured min/maximum required/allowed values are overwritten.

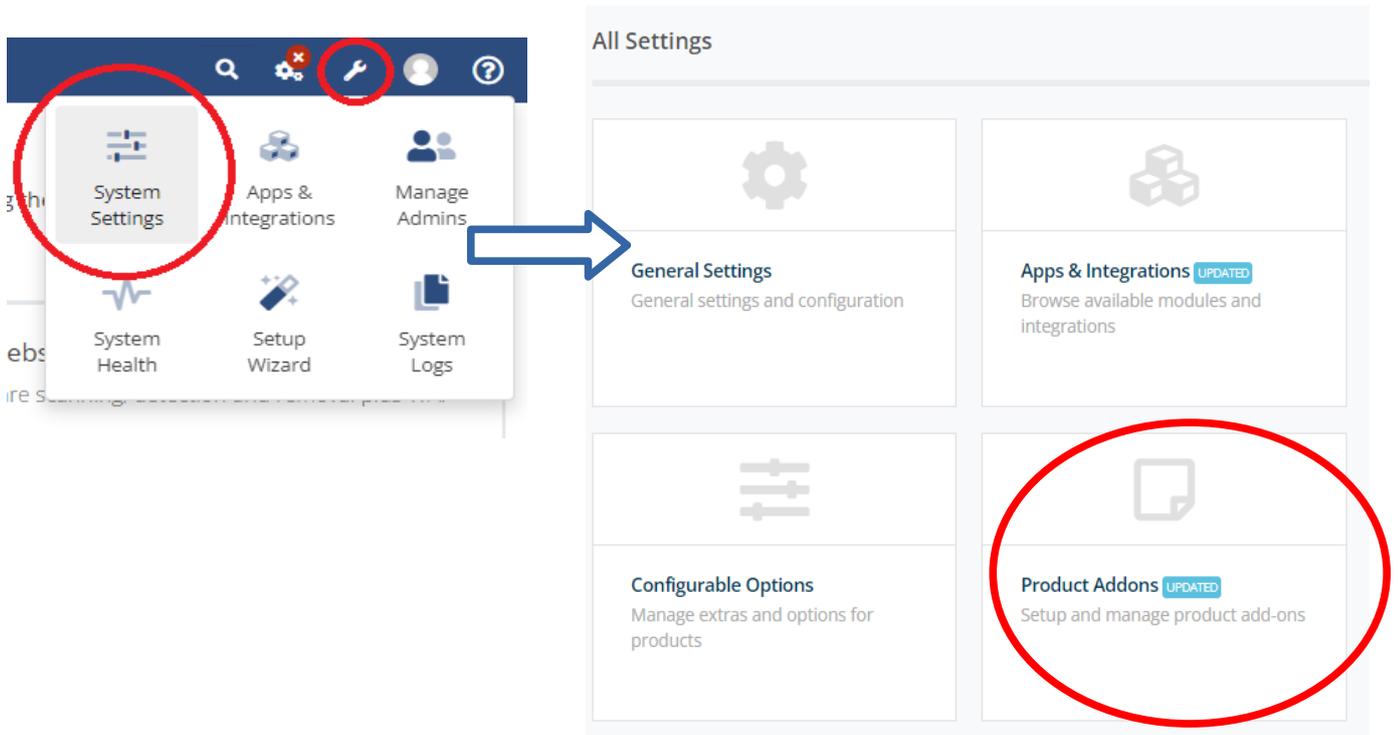

Configurable Options and basic products are now set.

## 5. Product Addons

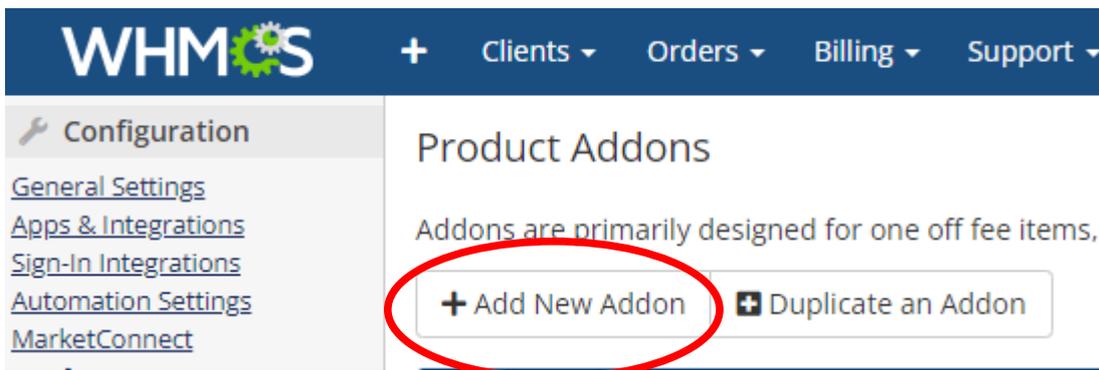

Product addons that can be configured in the module are **additional bandwidth** and **service extension (months)**.

Follow steps to configure addons:

1. Open **System Settings**, select **Product Addons**.

2. On next screen, click

### 3. Configure new addon.

**Create New Addon**

**Addon Type**  
Defines how WHMCS manages the item

Independent Product

Add-On Feature

**Name**  
The default display name for your new addon

**Module**  
Choose a module for automation

Proxy-Cheap

**Create as Hidden**  
A hidden product is not visible to end users

ON

**Auto Assign to Products**  
Automatically assign to all applicable products

OFF

Continue »

Set Addon Type – Independent Product

Add name, for example **Bandwidth**.

Select **Proxy-Cheap** module.

Create as Hidden: **ON**

Click **Continue**.

### 4. You may need to add two addons:

Addon Type	Product
Bandwidth Addon	Rotating Residential Proxy
Service Extension Addon	Others

5. Configure the rest of options as below.

### Product Addons - Edit Addon

Details Pricing Module Settings Custom Fields Applicable Products Associated Download

Name

Description

Tax Addon  Charge tax on this addon

Show on Order  Show addon during initial product order process

Suspend Parent Product  Check to suspend the parent product as well when instances of this addon are overdue

Welcome Email

Addon Weighting  Enter a number here to override the default alphabetical display order

Hidden  Enable to hide this addon from the client area order forms

Retired  A retired addon will no longer appear within the admin area (note you will still be able to view and manage existing purchases)

Hint: Uncheck „Show on Order” and „Suspend Parent Product”.

6. Switch to **pricing** tab.

### Product Addons - Edit Addon

Details **Pricing** Module Settings Custom Fields Applicable Products Associated Download

Payment Type  Free  One Time  Recurring

Buy Proxy - Residential Proxy

Save Changes Cancel Changes

14. Make sure all necessary products are on the right side.

15. Click **Save Changes** when done.

*Hint: You can create as many addons as you want, and assign them to products. This allows more control over prices. It only needs to meet a requirement of proxy type and addon type and only one type of addon can be assigned to one physical product.*

## 6. Service details

---

When service is set it should look in admin area similar to this:

Dedicated IP	<input type="text"/>
Username	<input type="text" value="httpip1"/>
Password	<input type="text" value="681236db-ca80-11ef-8647-0"/>
Status	<input type="text" value="Active"/>
Bandwidth	<input type="text" value="1"/> x per GB \$8.00 USD
Module Commands	<input type="button" value="Create"/> <input type="button" value="Renew"/> <input type="button" value="Suspend"/> <input type="button" value="Unsuspend"/>
Connect service	<input type="text" value="Input proxy ID here"/> <input type="button" value="Connect"/>
Proxy 1150339	ACTIVE RESIDENTIAL Username: pcmVpcwn3K Password:PC_7Y7ZQg Expiration Date: 04/04/2025 09:43

**Password** – This is set automatically upon successful creation of the service. It contains **order id** of corresponding service in API and should be never changed unless you want to re-assign it to different service.

**Connect service** – if you want to assign a service of proxy to the current WHMCS service and you know proxy ID (it can be obtained from dashboard). When you fill correct proxy ID into the field and click green „**Connect**” button, it should fill „Password” field with correct identifier. Afterwards click **‘Save changes’** below.

<input type="button" value="Save Changes"/>	<input type="button" value="Cancel Changes"/>
---	---

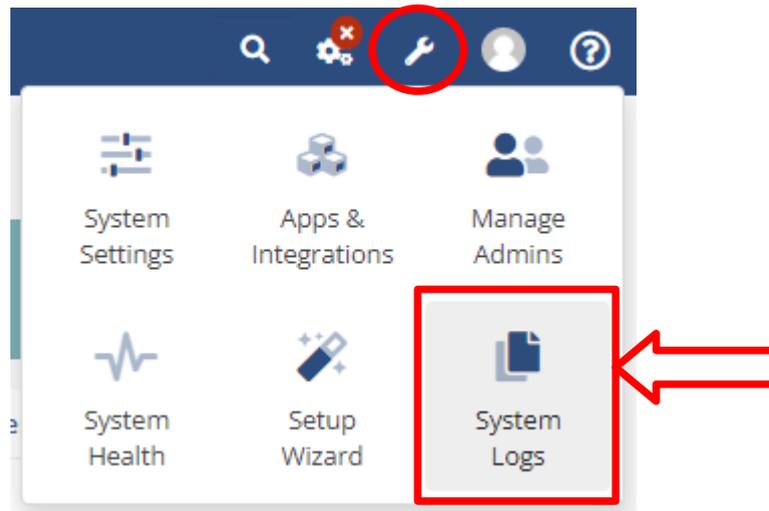

**Proxy xxx** – On this part you can verify the status of this service. All data contained here come from API.

## 7. Logs

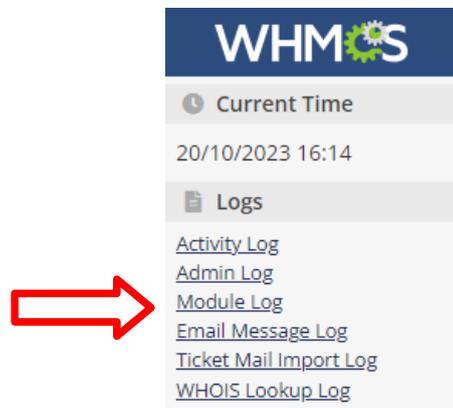

The module supports API logs. Every request to API is logged. It's useful when something doesn't work as expected.

To use logs:

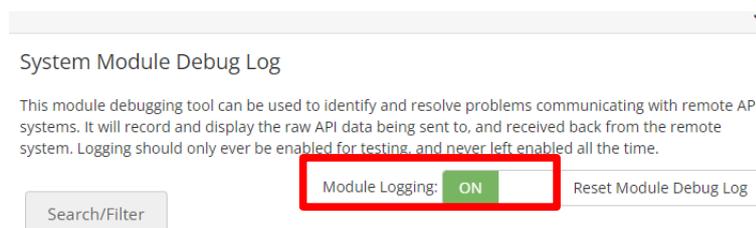

1. Open **System Logs** from top bar.

2. Select **Module Log** on the left bar.

3. Switch **Module Logging** to **ON**.

4. Done. Now all API requests will be logged on this page for reference.
